

# SeeTrue Automatic AI-based Threat Detection at Airports

## Addressing the Challenges of Airport Security

In the aviation sector, maintaining stringent security measures is the primary operational expense, with airports constantly required to adapt swiftly to emerging threats that impact passengers and staff.

SeeTrue leads the charge in revolutionizing the security screening process by integrating Artificial Intelligence with existing X-ray and CT machines, effectively tackling challenges related to throughput, customer experience, security, and cost efficiency with its innovative solutions.

## Key Features:

Accurate real-time detection

Machine-agnostic

Low reject rates

Smart auditing and debriefing of scans

Quick introduction of new threats

2-Hour training required

Seamless integration

Low Total Cost of Ownership (TCO)

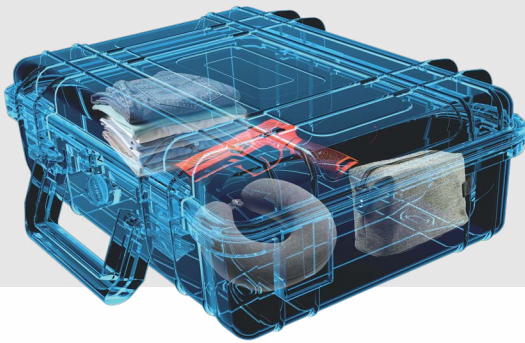

## Pioneering Artificial Intelligence-based Threat Detection

SeeTrue's AI-based threat detection software delivers accurate and reliable real-time detection of prohibited items, including guns, knives, liquids, electronics, and other restricted items across various baggage and parcel types.

With high detection probability and low reject rates, SeeTrue boosts efficiency and throughput. By reducing the risk of human error, it provides invaluable support to operators, regardless of their experience level, creating consistently high detection rates, a new standard in the realm of security operations.

## Automated Prohibited Items Detection

SeeTrue's cutting-edge APIDS (Automated Prohibited Items Detection Software) is available today as an operator-assist solution and will soon enable image-on-alarm operation following regulatory approvals. Highlighting suspicious objects on-screen, it offers crucial support for security officers, streamlining decision-making processes. This innovation significantly boosts operational efficiency and throughput amid severe staff shortages and rising passenger volumes. It optimizes resource utilization, ensuring airports maintain high-security standards while accommodating growing demand.

Our solution is implemented in airports worldwide, intercepting 1.5 million prohibited items from boarding planes.

## Comprehensive Checkpoint Solutions

SeeTrue offers a suite of applications for checkpoint environments alongside its detection software, including a process analytics dashboard for remote supervision and debriefing, officer performance monitoring, and a centralized threat management system.

These complementary solutions further enhance the efficiency and effectiveness of airport security operations, offering a holistic approach to addressing the evolving challenges in the aviation industry.

## SeeTrue: The Future of Airport Security Screening

We are committed to optimizing security screening and operational excellence in the aviation industry for checkpoints, hold baggage, cargo, and worker screening.
