AI-Driven Threat Detection in Customs and Parcels

Addressing the Challenges of Customs Facilities

The surge in e-commerce has led to a significant increase in the volume of items requiring inspection. Combined with a shortage of skilled personnel and resources, this often results in sample screenings, compromising security. The growing sophistication of concealed goods further complicates detection efforts.

In the fast-changing Customs and Parcels sector, implementing AI-powered Automated Threat Detection Software goes beyond a simple technological improvement - it is a crucial strategic move.

SeeTrue revolutionizes customs operations, enhancing efficiency and unlocking new opportunities for revenue growth.

Key Benefits:

- Achieve 100% detection with reduced headcount
- Enhanced detection capabilities
- Increased confiscation rates
- Cost-effective solution
- Oversight and supervision to prevent accomplice activities
- Automatic reporting of confiscated items
- High accuracy and reliability
- Efficient and fast performance
- Seamless, machine-agnostic integration

Enhance Efficiency and Boost Revenue with AI-Powered Threat Detection

Artificial Intelligence is the key to large-scale, consistent, and efficient security screening operations. For customs agencies facing the growing challenges of international trade and increasingly sophisticated smuggling methods, AI-driven screening is essential.

SeeTrue's AI-based Threat Detection software enables the accurate identification and interception of a wide range of prohibited, controlled, and contraband items in customs and parcel shipments, ensuring an effective and scalable screening process.

By seamlessly integrating AI with existing X-ray machines, SeeTrue's innovative solutions facilitate 100% screening using current manpower, while unlocking new opportunities for revenue growth. This approach supports key objectives in both security and operational excellence.

Customs facilities often face operational challenges due to the sheer volume of parcels that need screening. One of the most compelling advantages of AI adoption is its significant improvement in speed and efficiency.

Comprehensive Supervision Solutions

SeeTrue offers a comprehensive suite of applications designed to enhance checkpoint environments, complementing its advanced detection software. This includes a process analytics dashboard for remote supervision and debriefing, officer performance monitoring, and a centralized threat management system. These integrated solutions significantly boost the efficiency and effectiveness of security operations, offering a holistic approach to tackling evolving challenges.

SeeTrue: The Future of Customs Facilities Screening

We are committed to optimizing security screening and operational excellence in customs facilities for baggage, mail, and parcel screening.
